

Anything that enters a storm drain goes directly to a local river or lake.

It does not go to a waste water treatment facility.

Do you know you live on waterfront property? You do if there is a storm drain nearby! Storm drains carry runoff water directly to rivers and lakes. Whatever washes off your yard and street runs directly into these waters. That includes lawn fertilizer, grass clippings, pet waste, and tree leaves and seeds—all sources of phosphorus, the plant nutrient that turns rivers and lakes green with algae.

Keep your runoff clean.
Keep our lakes and rivers clean!

REMOVE LEAVES FROM THE STREET

- Rake leaves, seeds and grass clippings out of the street and gutter.
- Compost on site, or bag for collection or community compost program.

LEAVES END UP IN THE STORM SEWER.....

PREVENT EROSION

- Phosphorus attaches to soil. Keep soil from washing into the street.

FERTILIZE THE LAWN, NOT THE LAKES AND RIVERS

- Choose a zero-phosphorus fertilizer. The majority of Twin Cities' lawns are naturally high in phosphorus and will remain healthy without adding more.
- If you think your lawn needs phosphorus, test your soil first. For more information call INFO-U at 612-624-2200, message 468.

LAKES, RIVERS, & STREAMS

ANIMAL WASTES END UP IN THE STORM SEWER.....

GRASS CLIPPINGS END UP IN THE STORM SEWER.....

- Sweep spilled fertilizer off of paved surfaces.
- Remember, compost and manure contain phosphorus too.

CLEAN UP AFTER PETS

- Scoop the poop. Pet waste contains phosphorus as well as harmful bacteria
- Don't feed the geese

KEEP THE PAVEMENT CLEAN

Sweep up grass clippings and fertilizer from driveways, sidewalks, and streets.
