Public agencies of all sizes face a balancing act as the public demands an ever-increasing scope of services and limited budgets available to provide these services. Finding this balance requires experience and expertise to ensure that the public health, safety and welfare are protected in a fiscally responsible manner.

Gewalt Hamilton Associates, Inc. concentrates more than half of its professional practice in the public sector, teaming with municipalities, county and state agencies, transportation agencies, storm water commissions, school districts and park districts. We are particularly aware of the sensitive nature of public projects, planning issues and the need to maintain a positive relationship with local residents and businesses.

GHA currently serves as municipal engineer for a number of Chicago area municipalities and as a consultant to over 40 additional communities. Our wide range of services allows communities to benefit from the resources of a full-service engineering firm, without having to fund these services on a full-time basis.
